

Matthew Maynes

Engineering Director

Ontario, Canada

linkedin.com/in/matthew-maynes github.com/mattmaynes

Full-stack engineering leader with a product-engineering mindset. Hands-on, AI-enabled, and customer-obsessed. I solve problems by bringing the right people and technology together, default to action, and lead from the details whether I'm managing or building.

How I Lead

Customer-obsessed. Driving customer value is the mission; everything else serves it.

Default to action. I lead hands-on and in the details, and I follow through to deliver results.

Empower with accountability. I give teams and leaders ownership of their outcomes while providing support, clarity, and accountability.

Grow people directly. Specific, timely feedback: celebrate wins in public, give constructive feedback in private.

Own it as a team. We celebrate wins together; I take responsibility for the failures.

Titles don't make leaders, people do. Whether managing or contributing, I'm always leading.

Skills

Full-Stack & Product Engineering Leadership

Org Building & Team Development

Strategic Planning & Roadmapping

Training, Mentoring & Direct Feedback

AI-Enabled Engineering

Software Design & Development

Software & Tools

Languages	Python, C/C++, Java, JavaScript/TypeScript, q/kdb+
AI	Claude, Codex, Gemini, LLM integrations, agentic applications
Frontend	Next.js, React, Tailwind CSS, Angular
Backend & APIs	Quarkus, API gateway design, domain-driven versioning
Infrastructure	Docker, Kubernetes, Amazon EKS, Helm, Terraform, Argo CD
Observability	Grafana, Prometheus, OpenTelemetry, ClickHouse
Streaming/Messaging	Kafka, MQTT, Kinesis, Google Pub/Sub
Analytics	Google Analytics, Tealium, Pendo
Tooling	Git, Shell, JIRA, Aha!

Work History

Engineering Director - Constant Contact

Remote, ON | 2025-05 - Current

- Led 36 engineers across 7 teams spanning two organizational pillars: Product-Led Growth and Emerging Growth.
- Product-Led Growth: drove product experimentation (Arcanine, Orion) to raise activation and conversion rates, plus an AI Infrastructure team delivering AI-driven conversion features such as AI-generated emails and content.
- Emerging Growth: oversaw a zero-to-one, AI-powered agentic social media management tool (ctct.social) now serving paying customers at a 20% trial-to-paid conversion rate, a new events-hosting product, and core social platform stability.
- Sustained the delivery-velocity gains from the Rise initiative and owned the public-facing marketing site (Front-of-Site).

Senior Engineering Manager – Constant Contact

Remote, ON | 2024-02 – 2025-05

- Led 3 teams (Core Platform, Rise, and User Intent) through a full UI and infrastructure modernization.
- Stood up a new Amazon EKS cluster managed with Terraform, using Argo CD for application deployment.
- Rebuilt the UI in Next.js, TypeScript, React, and Tailwind CSS, establishing a new design system and rebuilding the entire custom AdTech interface.
- Delivered a new API gateway in Java/Quarkus, modernizing and versioning the Constant Contact API with domain consistency.
- Improved page load time from 800ms to 200ms and Lighthouse scores from ~30 to 80+.
- Accelerated deployment cadence from once every two weeks to twice per day, a 20x improvement in one year.
- Led Intent-Based Onboarding: a streamlined flow that tailors the experience to each user's stated intent (or an import from their website), paired with a new dashboard and contacts experience.

VP Real-Time Analytics – KX

Remote, ON | 2023-08 – 2024-02

- Led 6 engineering teams architecting and delivering kdb Insights and kdb Insights Enterprise, cloud-native distributed systems on Docker and Kubernetes.
- Delivered a highly available, real-time platform with cross-zone redundancy, data encryption, and data entitlements.
- Optimized cross-team communication with feature ceremonies and dedicated channels, breaking down silos and enabling collaboration.
- Built the foundations of KDB.AI, a time-series vector database enabling machine learning and LLM workloads.

Engineering Manager – KX

Kanata, ON | 2020-08 – 2023-08

- Led 2 teams building kdb Insights Stream Processor, a low-latency, high-throughput stream processing system.
- Drove full-stack development across q/kdb+, C, Python, Java, and TypeScript with Angular.
- Focused on high-impact delivery by prioritizing customer needs while balancing technical requirements.
- Empowered the team with dedicated learning time and coached individual contributors into scrum master roles.

Senior Software Engineer – KX

Kanata, ON | 2015-08 – 2020-08

- Led a team building a data transformation platform in q/kdb+, C, Python, JavaScript, and TypeScript.
- Built 60+ operators for a no-code/low-code data pipeline builder web application.
- Designed and developed the data importer/exporter for KX Analyst.
- Mentored junior developers and interns.

Software Developer – Bedarra Research Labs

Kanata, ON | 2015-01 – 2015-08

- Built KX Analyst, a data-analytics toolkit, IDE, and ETL tool for q/kdb+, developed in JavaScript, C, q/kdb+, and Python.
- Implemented user authentication using SAML SSO.

Software Developer – Team Eagle

Campbellford, ON | 2013-05 – 2014-02

- Developed Eagle SNAP, an iOS app (Objective-C, Xcode) for submitting NOTAMJs to Nav Canada from an iPad.
- Integrated SOAP web services to submit reports. NOTAMJs are real-time safety notices issued by airport inspectors to alert pilots of environmental conditions.

Certifications

2022-03 Agile Project Leadership

2022-03 How to be an Effective Remote Manager

2019-03 Machine Learning Engineer Nanodegree

Education

Bachelor's of Engineering: Software Engineering

Carleton University, Ottawa, ON | 2012-09 - 2017-04
